Java-8

=> Lambdas

Functional Programming

# those feature that define functional programming

# streams

# Executor (Future)

# Concurrency Collection

Style :

Traditional : Imperative

(HOW)

#exposing the steps how to perform an operation

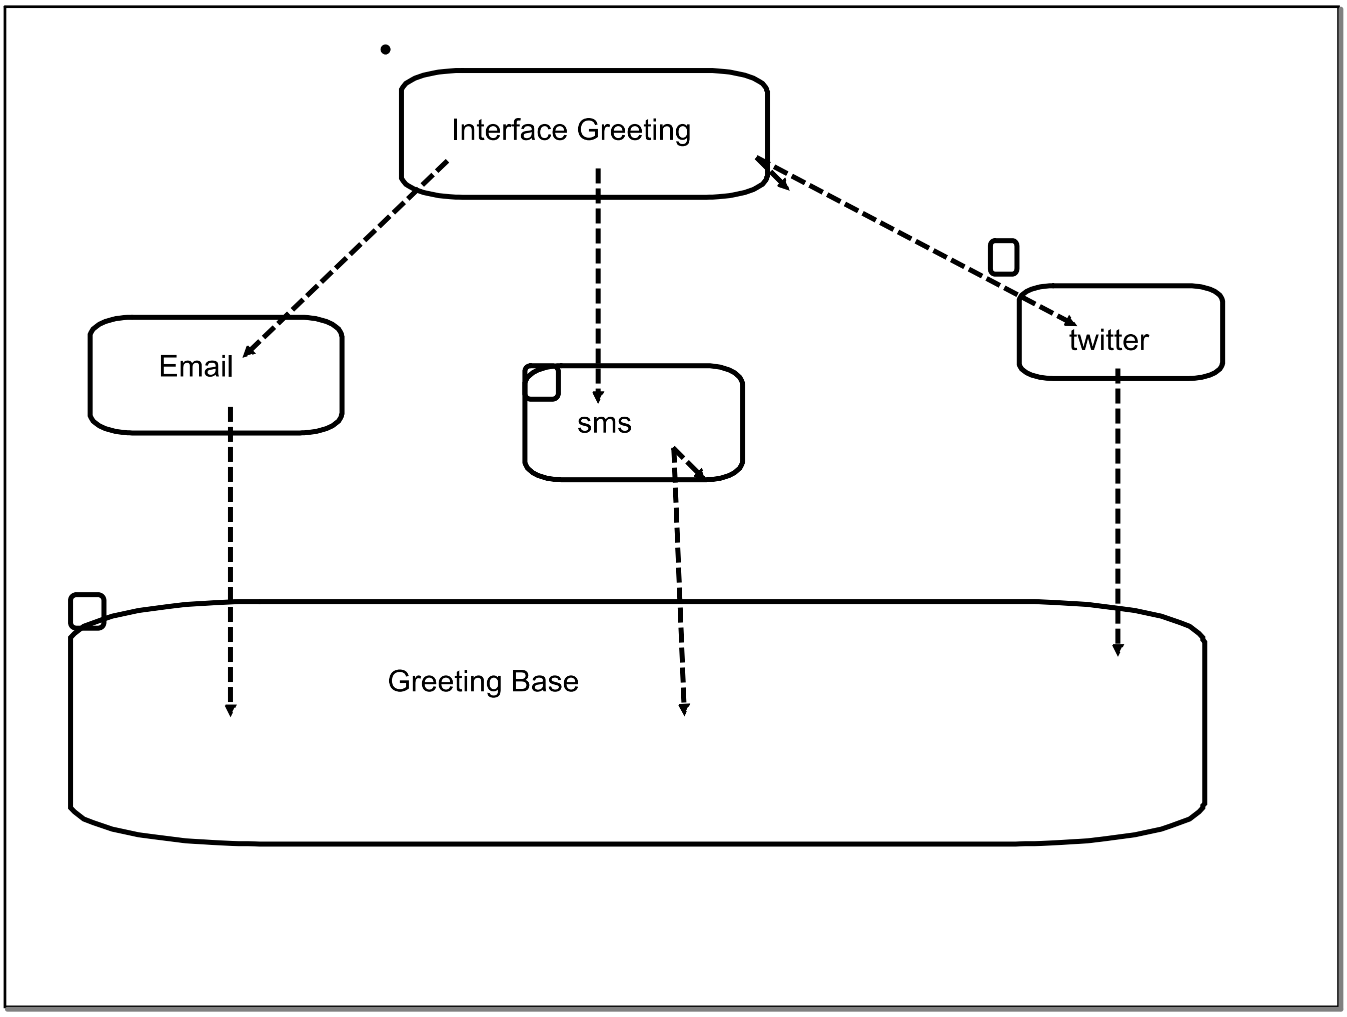
# embrace object mutability (not in sync with concurrency)

Functional : Declarative

(What) : result

immutability

Analogous SQL



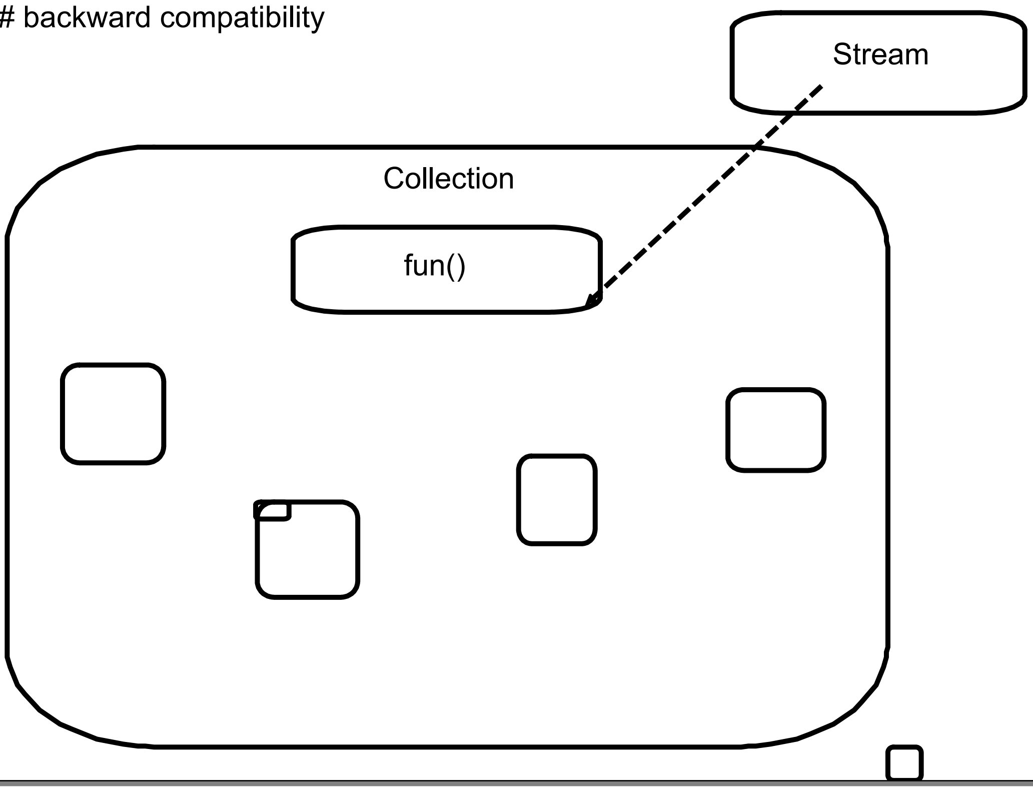
Interface Greeting
Email
sms
twitter
Greeting Base

Interface :

# default method (definition)

# multiple implementations can be inheritance

# backward compatibility



Escape from OOPs

independent Functions (not wrapped inside an object)

Relationship between interface and function

1. interface must have only one abstract method (any number of default/static) :

Functional Interface : Annotation @FunctionalInterface

2. single method signature must match with function implementation

Lambda expression

```
    (<arg1>,<arg2>) -> {
}

    arg1 -> {
    }

    () -> {
    }

    (<arg1>) -> <return> <single instruction>

    (a,b) -> <return>a+b;

    (a,b) -> {
        return a+b;
    }
```

```
Pre defined functional interfaces
    => Runnable
    => Comparator
Explicit Functional Interface
    # Consumer
        void accept(<>);
        DoubleConsumer() // specialized implementations on primitive
        BiConsumer
            void accept(<>,<>);
    # Predicate (test)
        boolean test(<>)
    # Supplier
        <> get()
    # Function
        <> apply(<>)
```

Stream :

not a data structure

immutable (Thread safe)
